

## Find the SharePoint Content You Need More Quickly

Enable your SharePoint web administrators and designers with the ability to manipulate and improve search for your organization in little time. Anyone familiar with SharePoint understands its complex, nuanced nature, and the challenge of meticulously managing and finding content in the SharePoint environment.

INCATech uses readily available Commercial off-the-shelf (COTS) SharePoint Web Parts, our in-depth knowledge of data design, information architecture, and the SharePoint Term Store to create User-Centric Search tailored to user needs and mission objectives. As a result, we can move your organization toward finding the information and understanding it is looking for in a brief period.

## How We Pull It Together

# SharePoint Managed Metadata

INNOVATIVE SOLUTIONS FOR CRITICAL MISSIONS

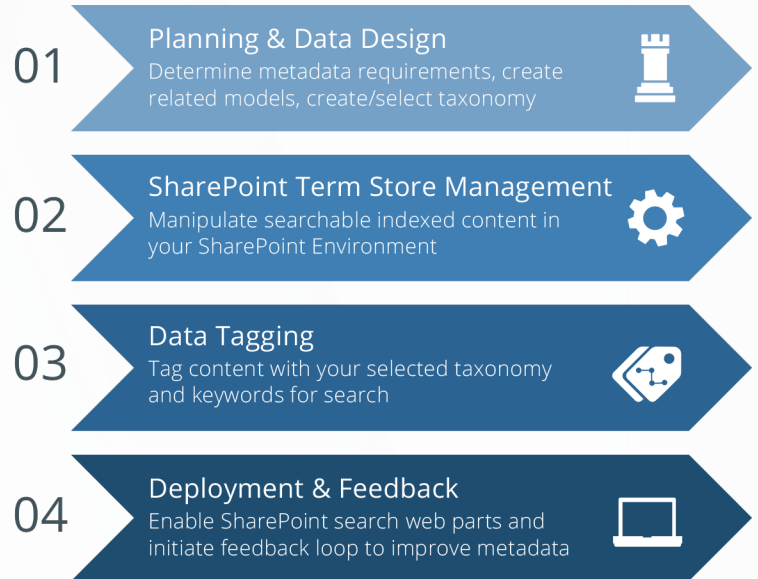

## We Make Your Content Findable with Managed Metadata

Imagine a library of books, magazines, and publications without a card catalog. Without an organizational system, we don't know what is in a library or how to find items. It is akin to having a SharePoint environment with multiple document libraries but no organizational strategy. Content cannot be found systematically or quickly.

INCATech can help you develop a managed metadata strategy to improve search and findability in your SharePoint Environment.

### We've Helped Organizations To...

- Manage various data and content types across distributed SharePoint document libraries and portals to coordinate business development missions.
- Organize an assortment of content types to power the most heavily trafficked public websites at Department of State, <https://travel.state.gov>.
- Transform how data is managed, shared, and leveraged to promote next-generation open data, content delivery networks, content management systems, common code libraries, frame-works, and tools.
